# Introduction

---

- I created this template for presentation slides under the (unofficial) theme of the SMU.
- Here is the set of files to be used:

Files	function
<b>slides.Rmd</b>	main file for text
<b>beamerthemeSMU.sty</b>	the style file for SMU beamer
<b>SMUbg.png</b>	background image

- Compile the **.Rmd** file in Rstudio.

**Block**

---

## Exercise block

Some exercise

## Definition block

Some definition

**Extras**

---

- With Rmarkdown, code chunks can be embedded beautifully.

```
> print("Hello world")  
[1] "Hello world"
```

```
> print("Hello world")  
[1] "Hello world"
```

```
> print("Hello world")  
[1] "Hello world"
```

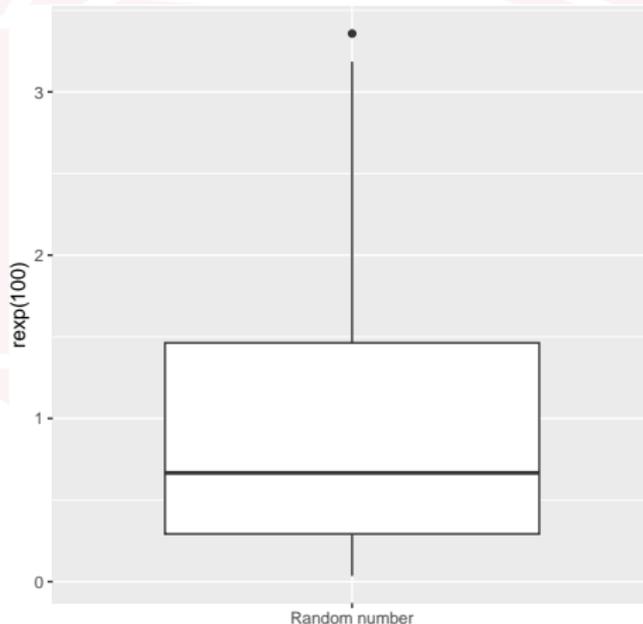

# Plotting

```
> ggplot2::qplot(x = "Random number", y = rexp(100),  
+               geom = "boxplot", xlab = "")
```

Warning: `qplot()` was deprecated in ggplot2 3.4.0.

This warning is displayed once every 8 hours.

Call ``lifecycle::last_lifecycle_warnings()`` to see where this warning was generated.

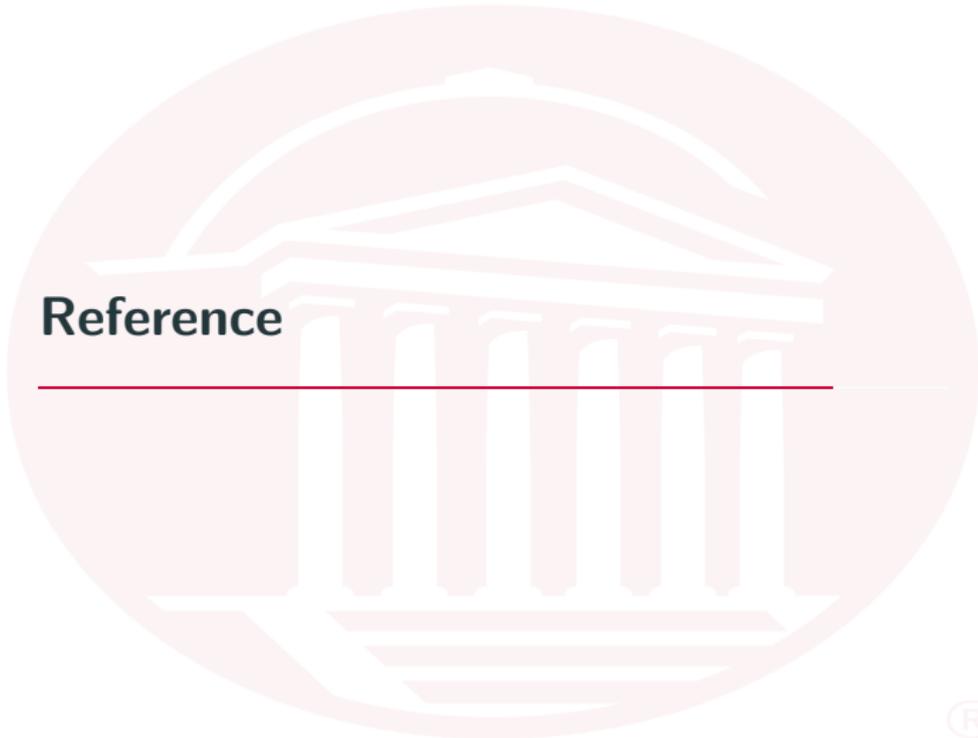

- If a bib file is present, bibtex reference can be included too.
  - Chiou and Xu (2017) proposed methods for length-biased data
  - Chiou et al. (2018) proposed methods for panel count data
  - Xu et al. (2020) proposed methods for recurrent event data
- Citation can be mentioned passively.
  - `aftgee` is a useful R package for fitting survival data (Chiou et al. 2014).
